MICROSOFT POWER AUTOMATE RPA DEVELOPER

DURATION
5 DAYS

Overview

Candidates for this course automate time-consuming and repetitive tasks by using Microsoft Power Automate. They review solution requirements, create process documentation, and design, develop, troubleshoot, and evaluate solutions. Candidates work with business stakeholders to improve and automate business workflows. They collaborate with administrators to deploy solutions to production environments, and they support solutions.

Audience Profile

If you're a developer with a keen interest in providing automated solutions for your organization, this certification could be a great fit for you. You automate time-consuming and repetitive tasks by using Microsoft Power Automate. You review solution requirements, create process documentation, and design, develop, deploy, integrate, troubleshoot, and evaluate solutions. Working with business stakeholders, you help to improve and automate business workflows.

Outline

Module 1: Power Platform Robotic Process Automation overview

This learning path provides an overview of the Robotic Process Automation in Power Platform. It also includes an introduction to developer resources and process mining.

Module 2: Build and optimize cloud flows in Power Automate

This learning path covers how to build cloud flows, expressions, error handling, troubleshooting and HTTP connectors in Power Automate.

MICROSOFT POWER AUTOMATE RPA DEVELOPER

DURATION
5 DAYS

Outline

Module 3: Desktop flows and Robotic Process Automation in Power Automate

This learning path covers essential skills in Power Automate for desktop, including building and configuring flows, handling variables, defining parameters, automating tasks with loops, and scripting. You'll also learn web automation, recording flows, and managing exceptions and errors.

Module 4: Connect and share cloud flow to desktop flows in Power Automate for desktop

This learning path details how to use gateways to connect desktop flows to various technologies and cloud services, and how to maximize the use of robotic process automation (RPA). It also covers how and when to share cloud flows, and which types are appropriate to use.

Module 5: Get started with custom connectors for Microsoft Power Platform

This learning path explores custom connectors in Power Platform and explains how to configure and use them with apps and flows.
